

DIGITALBRIDGE™

DigitalBridge, Inc. was founded in 2004, in Orem, Utah, by industry-leading executives from the technology, health care and legal fields. The company's mission is to build solutions that bridge the information gap that exists between organizations involved in complex ecosystems. The revolutionary, patent-pending DigitalFusion™ platform enables disparate systems within the ecosystem to communicate. We call it an architecture for information in motion. Our solutions leverage existing technology investments and eliminate the barriers to critical information sharing and management, providing protected information sharing to the justice, education and healthcare markets. Our unique solutions do not require rip and replace of existing legacy systems, as they reside on top of existing systems and allow authorized users to access the right information, at the right time, in the right context, in a secure, timely manner, 24/7/365, from any Web-enabled device.

Your ecosystem made digital.™

We do that.™

Welcome to DigitalBridge.
